By. Tony Tran

Xin Chào!

My name is Quang, but you can call Tony

I'm a **Designer** and a **Developer** in Ho Chi Minh, Vietnam.

With a passion for creating meaningful and visually appealing digital experiences, and understanding user needs to turn them into creative solutions, I bring creativity and functionality to every project I work on.

Please feel free to look around of my works!

Pet projects.

Zitylot

Parking lot Management System

Year: 2024

Zitylot is one of the fanciest project that my team used to develop in 2024. It's a parking system designed for simplicity and ease. Clean layouts and friendly visuals make managing parking or finding a spot effortless and stress-free for everyone.

[More details on my Github](#) →

Photodia

Social Network User Interface Prototype

Year: 2024

Photodia is a social platform for photographers, designed to inspire and connect. Clean and modern, it's a place where creativity shines and meaningful connections come naturally

[More details on my Github](#) →

Photodia

Infinity Bugs

Gameplay and character design

Year: 2024

Infinity Bugs is a Python-based fighting game where I led gameplay design, character creation, and core development. Vibrant characters and engaging mechanics make every run an exciting adventure. Funny thing that the name of the game is still a bug.

[More details on my Github](#) →

The logo for 'Infinity Bugs' features the word 'INFINITY' in blue and 'BUGS' in yellow, both in a stylized, blocky font. The letters are set against a light blue grid background.

Infinitu P

Qutting Job

Unity developement

Year: 2025

Quitting Job is a Unity-based endless runner game developed in 2025, set in a dynamic construction site environment where players control a worker navigating through obstacles and colecting coins.

More about me!

I glad that you have scrolled this so far!

My name is Quang, and I'm a Designer and a Developer in Ho Chi Minh, Vietnam. I'm set to graduate with a Software Engineering degree from Saigon University (SGU)

Should you be wondering why I chose to pursue the Game Industry rather than following a traditional Developer path after graduating as an Engineer, here is my story:

While my studies and projects strengthened my development I foundation, I discovered my true passion lies in creating interactive and emotional experiences, not just writing lines of code. Working as both a Design and Developer in team, I realized that games combine everything I love creativity, storytelling, design, and technology. Bringing ideas to life through gameplay and visuals excites me far more than coding alone.
